4 - Interior View (Day)

The program calls for a 400,000-sq-ft elementary school on a sloping and small site, within a newly developed residential community.

Two classroom wings radiate from a central, existing multipurpose space and form a variety of outdoor spaces.

The exterior of the school has a Mediterranean theme to fit in with the surrounding residences, and features cascading steel roof planes and wall panels over the central space.

The design manager for the entire program is a challenging site and demands a being built as a great neighbor and a great asset for the community.
