3 - Interior View (Day)

The program calls for a 400,000-sq-ft elementary school on a sloping and small site, within a newly developed residential community.

Two classroom wings radiate from a central, multi-purpose atrium and form a variety of outdoor spaces.

The exterior of the school has a Mediterranean theme to fit in with the surrounding residences, and features cascading steel roof planes and wall panels over the central atrium.

The design program for the entire program is a challenge to fit and maximize a very tight program and a small site needed for the community.
